PROFILE

Frontend engineer with 4+ years of experience building production web apps with TypeScript, React, and Next.js, plus Vue and Nuxt. I work with a product mindset: I want to know why a feature is needed and who it's for. I care most about performance, UX, and code that stays easy to change and support as the product grows. Frontend is my main area, and I also take full-stack ownership of features, from the database to the UI. I use AI tools every day to plan and validate implementations, write code faster, and ship fewer bugs.

EXPERIENCE

Your Next Agency (YNA), Frontend Engineer
Feb 2025 - Present | Amsterdam, remote

- Improved payment retries, error handling, form data recovery, and fallbacks for a healthcare checkout, including a fallback for an unavailable address autocomplete service. These changes kept checkout operational during two Cloudflare outages.
- Designed and built the backend (Next.js, Payload CMS) for the Dutch Railway Museum's collaborative planning feature, used to create 100+ polls per month: invite-based voting, organiser permissions, concurrent updates, scheduled WhatsApp reminders through a job queue with signed webhooks and opt-out handling, encrypted phone numbers with automatic data retention, and end-to-end analytics.
- Initiated the extraction of 5+ shared plugins into reusable npm packages, making update rollout across projects up to three times as fast.
- Raised PageSpeed Insights performance scores to 80+ across 10 production sites, reduced a shared e-commerce JavaScript plugin to 30% of its original bundle size, and built reusable Next.js image delivery through an AWS CDN with responsive AVIF/WebP and selective preloading.
- Built petition, email invitation, multi-step registration, donation, and e-commerce flows for the redesign of a news platform spanning 80+ subsites.
- Designed and built the frontend for an internal CMS plugin that generates product feeds for Meta and Google, with dynamic field mapping, feed previews, and real-time generation progress.
- Extended the agency's shared AI developer tooling: Codex agents, project configuration, hooks, and regression tests.
- Worked on 20+ client projects in e-commerce, healthcare, media, and non-profit, from estimation and technical planning to release and support, including direct discussions with clients about requirements and trade-offs.

Pharmaceutical Cosmetic LLC, Frontend Developer
Nov 2022 - Feb 2025 | Moscow, remote

- Rebuilt the main e-commerce site with Nuxt and headless WordPress, reducing page load times from 5-10 seconds to 2-4 seconds and enabling the marketing team to launch campaigns.
- Created a shared design system and component library across the company's websites, cutting promotional page development time by 60%.
- Designed the UX for the main e-commerce site, including how product filtering should work.

CORE SKILLS

Frontend: TypeScript, React, Next.js, TanStack Query, Tailwind CSS, Vue 3, Nuxt
Backend & CMS: Node.js, REST APIs, Supabase, Payload CMS, Craft CMS, PHP
Engineering: Web performance, component libraries, accessibility, Vite, Turborepo, GitHub Actions
Testing: Playwright, Vitest
AI-assisted dev: Claude Code, Codex, MCP integrations, agent skills and hooks

LANGUAGES & EDUCATION

Languages: English B2 • German B2 • Russian native
Education: FH Dortmund, Master's studies, Creative Audio Director (2020 - 2022)
Litovchin Institute of Film and TV, BA, Sound Design (2012 - 2017)
